

# Basic Environmental Policy

Our group operates in the domain of weather and climate, driven by the fundamental desire to 'help people in times of need' and the dream of "Saving the lives of sailors; Saving the future of our planet too." We believe our mission is to realize a sustainable society where human activities, business operations, and the global environment can coexist harmoniously.

We are convinced that minimizing risks through weather and climate services, reducing environmental impacts, and other daily efforts will lead to a sustainable society for humanity, businesses, and the planet. To this end, we have established and will adhere to the following environmental policy, working alongside our supporters and stakeholders toward a sustainable future.

1. Promote climate change adaptation and mitigation through our services

Our weather and climate services will enable 'adaptation' to extreme weather events caused by climate change, as well as 'mitigation' efforts to reduce environmental impacts such as greenhouse gas emissions.

2. Reduce our own environmental impact

We will work to reduce our environmental impact by cutting greenhouse gas emissions and introducing renewable energy sources.

3. Contribute to biodiversity conservation through our business

In collaboration with corporate and individual supporters, we will work to 'visualize' the state of biodiversity, participate in related initiatives and industry groups, and cooperate with external parties to conserve biodiversity.

4. Contribute to a circular economy through our business

We will consider the environmental impact of our operations, promote sustainable procurement, recycling, and waste management strategies, and contribute to a circular economy through our weather and climate services.

5. Raise environmental awareness internally and externally

We will ensure that every employee understands the importance of a sustainable society. Together with our supporters and stakeholders, we will create environmentally-conscious services, provide environmental education, and raise awareness.
