

# FLIGHT WATCH

## OVERVIEW

WNI Flight Watch meets the requirements of 4D15 and 4D1 and provides users with aircraft tracking and weather monitoring.

Customized flight tracking and weather alerts based on user preferences and monitoring requirements.

View WNI own original weather information in real time and have access to various weather information.

COMPLIANT MONITORING

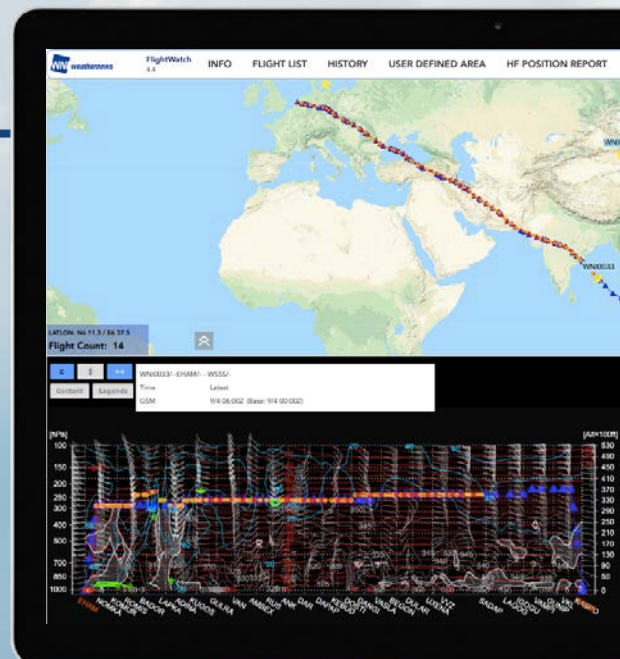

WEATHER ALERTS

REAL-TIME WX INFO

## FLIGHT MONITORING MADE EASY

Weathernews Flight Watch is a browser-based solution and it can be accessed on any computer with Internet connectivity.

Moreover, the simple and intuitive design allows an efficient monitoring of flights.

## WEATHERNEWS WEATHER OVERLAY

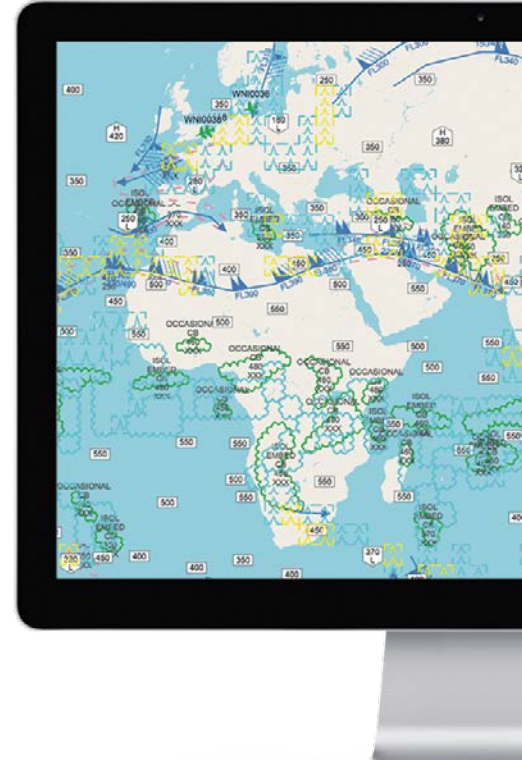

With the Weathernews Flight Watch, your flight dispatchers view not only the latest government information, but also WNI proprietary en-route products.

## ALERT FUNCTIONS

With Flight Watch, you will be able to create specific weather related alerts for each flight, taking into consideration your thresholds.

Creating alert functions and being alerted in time will let you take necessary action to avoid any serious accidents.

Alerts include: Vertical and Horizontal deviations, SIGMET alerts, ETA alerts, VOLCANIC ash alerts, ETOPS entering check, No Update alerts, METAR alerts if defined threshold are exceeded.
