World's Largest Private Weather Company Launches Global App with High-Precision AI-Powered Forecasts

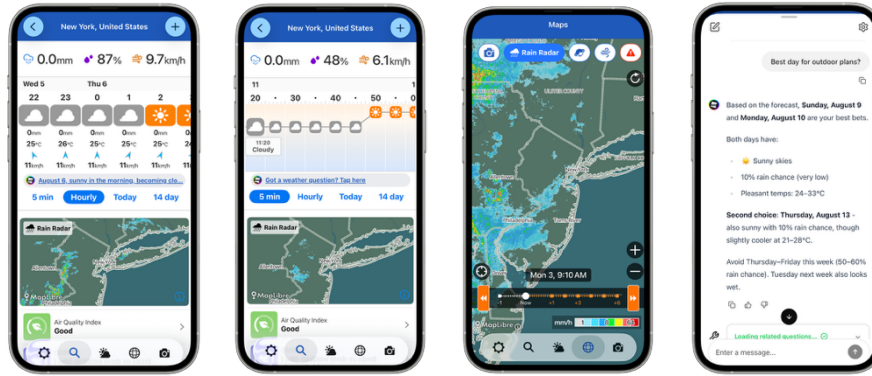

Weathernews Inc., one of the world's largest private weather information companies, has announced the global release of the “Weathernews” app that covers the entire world. The app is available for free download on the Apple App Store and Google Play. The rise in abnormal and extreme weather events around the world is rapidly driving demand for accurate weather information. Leveraging its world-class expertise in weather and disaster prevention and AI-powered forecasting technology, Weathernews provides highly accurate weather forecasts that can be checked in real time anywhere in the world.

The main features of the Weathernews app are as follows:

- 1 km Grid Weather Forecasts: See high-resolution weather forecasts anywhere in the world, broken down into a 1km grid.
- 10-Minute Rain Radar: Track rain cloud movement worldwide in high-resolution images updated every 10 minutes.
- 5-Minute Weather Forecasts: Get weather forecasts up to an hour ahead at world-class 5-minute intervals.
- Advisories and Warnings: Receives weather alerts from over 140 countries via the WMO and national meteorological agencies, covering 98% of the global population.
- AI Weather Explanations: An AI agent answers users' weather-related questions in their local languages.

Push Notifications: Get alerts when rain clouds approach, when advisories or warnings are issued, or when an earthquake is detected.

In 2023, Weathernews launched a dedicated team to collect observation and warning data from around the world. In addition to weather data compiled by the World Meteorological Organization (WMO), the team has been communicating directly with national meteorological agencies, working to establish a system for receiving data that has not been submitted to international organizations. Weathernews now receives weather data from more than 140 countries, with warning data covering 98% of the world's population. By combining this data with its proprietary forecasting technology, Weathernews has successfully developed high-precision, high-resolution weather forecasts and rain cloud radar. Weathernews will continue to evolve as “the most reliable weather platform” for people around the world, contributing to global society and enhancing corporate value through efforts to prevent and mitigate disasters in everyday life.

The Weathernews app supports 57 languages, including English, Spanish, and Japanese. Features such as rain cloud forecasts beyond three hours ahead and weather satellite images from the previous day are available in the U.S. for a \$1.99 monthly subscription.
